

Q : Do Peel Bar Color Additives have any affect on our skin?

No. The color additives in Peel Bar are legal additives and approved under the law. These additives are commonly used in food and lipsticks and are safe to use.

Q : I feel a tingle during use

Exfoliation acts by peeling off extra dead skin cells that have collected on the surface of your skin. At the beginning some people may feel slight tingling. The thicker the layer of the dead skin cells, the more tingle you will feel. This sensation will decrease after continuous use. Please refrain from foam pack if the tingle is too strong.

Q : I just started using the peel bar. Is it okay to leave soap foam for 2-3 minutes?

If you are a beginner or have thin or sensitive skin, please refrain from leaving soap foam for too long until your skin gets used to the peel bar. At the beginning, rinse off the foam right away. When there is no tingle, foam pack is recommended.

Q : I feel dryness and a stretching effect after the use of skin peel bar.

That is because your skin is being exfoliated with the effect of Glycolic acids. It decreases after your skin gets used to the Glycolic acids. We recommend moisturizing fully after use.

Q : I want to heal acne on my back and hip. Is there any body care product for acne?

Sunsorit Skin Peel Bar can also be used as body soap. You can get a peeling treatment by simply using it in shower and your whole body will become smooth. There are 4 types of formulas to match your skin. We recommend "Tea Tree" which is very effective for acne. It will exfoliate dead skin cells which cause acne and normalize turnover (skin regenerate cycle period) and reduce acne and acne scars.

Q : I heard after exfoliation, our skin is more susceptible to ultraviolet rays. Is this true?

Newly exposed skin by exfoliation of dead skin cells is more susceptible to ultraviolet rays. However, this can be protected by applying Sunscreen. Exfoliation also has the benefit of increasing skin absorbency and moisturizers will permeate into the skin more effectively. Leaving build up of melanin, which is the cause of the hyperpigmentation and dead skin cells on surface causes by a disturbed turnover cycle, is much worse. If you are concerned about susceptible skin, please protect your skin from ultraviolet rays after use of our product.
